

AAK Business Execution Plan v0.1

Internal Ops Document

February 23, 2026

Status: Active internal plan (pre-call freeze period)

Objective: Convert Agent Audit Kit into repeatable revenue while preserving Lane B non-claims discipline.

Strategy

AAK is sold as a deterministic decision-lineage and evidence primitive for high-liability AI workflows.

AAK is **not** sold as:

- compliance certification
- legal guarantee
- governance authority engine

Critical Path Sequencing

Phase 0 (Now through Giuseppe call)

Primary focus:

- MathLedger clean repo waves (A0–A4)
- Three-lane experiment pipeline (A5–A7)
- Preliminary results and call preparation

AAK scope in this phase:

- maintain release quality only
- ship claim-language hygiene
- ship scoring-provenance contract scaffolding
- no broad outreach campaign yet

Phase 1 (Immediately after call, Days 1–30)

Primary outcome: Close one lighthouse engagement.

- Build 40-account ICP list (regional banks/credit unions first)
- Execute 5 high-quality targeted outreaches per week
- Run discovery calls and push fixed-scope pilot close
- Close 2 paid audits target (minimum 1 lighthouse)

Phase 2 (Days 31–90)

Primary outcome: Convert one-off audits into recurring revenue.

- Convert findings into remediation sprint offers
- Convert remediation into evidence assurance retainers
- Publish anonymized case evidence with measurable deltas

Offer Ladder

- Tier 1: AI Decision Exposure Audit (\$2,500)
- Tier 2: Expanded Audit + onsite readout (\$5,000)
- Tier 3: Remediation Sprint (\$7,500–\$15,000)
- Tier 4: Evidence Assurance Retainer (\$2,000–\$4,000/month or annual equivalent)

ICP and Buyer Roles

Priority ICP:

- regional banks and credit unions
- insurance operators
- healthcare billing processors
- legal operations teams using AI automation

Buyer roles:

- CTO
- CISO
- Head of Risk/Compliance
- Internal Audit Lead

Default Sales Question

If a wire, lending, or other AI-influenced decision is challenged next quarter, can you reconstruct the exact prompt chain, tool calls, and influence context with tamper-evident evidence?

Architecture Requirements for Revenue Credibility

Must-have controls:

- deterministic replay and fail-closed verification
- deterministic narrative report output
- psych scoring provenance contract and versioned classifier metadata
- explicit synthetic vs live labeling in reports

Do not add during this cycle:

- dashboards
- hosted SaaS workflows
- compliance-certification language
- broad feature expansion

KPI Targets

Phase 1 KPIs:

- 5 targeted outreaches per week
- 4 or more discovery calls per month
- 1–2 paid audits per month

Phase 2 KPIs:

- 30%+ audit-to-remediation conversion
- 20%+ remediation-to-retainer conversion
- first referenceable lighthouse case

Commercial + Research Flywheel

Each real engagement should produce:

- paid revenue
- case-study evidence for sales
- anonymized empirical data for research

Risk Controls

- change messaging before changing architecture
- maintain non-claims discipline in all artifacts
- freeze scope during active pilot delivery
- require deterministic evidence before making outward claims

Execution Note (Current)

AAK is in freeze mode until after the Giuseppe collaboration call. New feature work is paused. Focus remains on MathLedger critical path and experiment scaffold readiness.
